

Love trees?

Want to help Newport grow its canopy? Want to learn how to prune trees?

Pruning is an essential component of tree care that is often overlooked. But with proper pruning, one can increase the longevity of a tree, allowing it to provide more economic and environmental benefits to the community.

The City of Newport will offer a free pruning workshop on **Saturday, January 26, from 9:00 am to 12:00 pm**, instructed by trained, certified arborists. The event will be held at the Newport Municipal

Complex Multipurpose Room at 998 Monmouth Street and is open to any Newport citizen interested in learning more about pruning. No RSVP required.

At the conclusion of the training, attendees will have the opportunity to sign up for an additional training and become a volunteer to assist with pruning young street trees throughout Newport (space is very limited).

As the city works towards increasing and equalizing canopy, pruning of young trees is just as important as planting new trees throughout the city, and is vital for the continued success of our urban forest.

Please join us as we work to improve the tree canopy of our beautiful city!
